Total Hardness Test Kit

Analysis Method : Complexometric EDTA Titration with only one reagent

Application

- » Swimming pool.
- » Drinking water Treatment.
- » Water use in various industry ; food industry , water bottling industry , cooling water etc.
- » Aquaculture : fish , shrimp , etc.

Cheaper price compare
to imported product
from USA & EU

Technical specification

- » Low measuring range : 0-10,2-20,5-50,10-100 mg/l as CaCO₃
- » High measuring range : 4-40,8-80,20-200,40-400 mg/l as CaCO₃
- » EDTA Titration method : color of indicator change from red to green.
- » Easy to use and quick response.
- » Precise measurement.
- » 1 set of test kit can test 80-100 samples.
(depend on hardness content in the sample)
